

Cohesion and HID Global Deliver Touchless Entry for All Access Points with Mobile Keycards to Enhance Tenant Experience and Streamline Operations

Cohesion offers full integration with HID card readers and all access control systems through a one-touch configuration to provide touchless access to elevators, doors, parking garages, turnstiles and tenant spaces using mobile keycards inside the Cohesion app.

CHALLENGE

Building managers face the challenge of streamlining operations while meeting evolving occupant demands around health, safety, and convenience. Traditional mobile keycard configuration workflows are cumbersome and take time away from other more valuable management activities like engaging directly with tenants and clients.

SOLUTION

A mobile keycard inside the Cohesion app integrated with HID's card readers is as fast and easy to use as a physical keycard. It allows tenants to use their phones for building access without having to swipe a physical keycard or talk to building security. Tenants are further empowered with the ability to give guests easy, touchless access. When tenants schedule their visitors in the app, visitors receive a QR code that grants them access to the building for the duration of their visit. With Cohesion's one-touch configuration, permissioned users can quickly and easily add or remove tenants in the system.

BENEFITS

Providing touchless access throughout the building also gives a high-end experience for tenants and guests. It enhances security, as it is easier to lose a keycard than one's phone. It improves building operations by offering self-serving tools to tenants. A mobile keycard also provides a safer experience for building tenants and visitors by reducing physical contact with surfaces. The Cohesion platform offers a broad set of features to improve health and wellness, smart building controls, data and insights, and tenant experience. Users will enjoy the ease of use of the Cohesion mobile keycard and HID integration as part of the building experience powered by Cohesion.

THE CHALLENGE

Creating a High-End, Touchless Workplace While Increasing Building Staff Productivity

Workers are more conscious than ever of their health, wellness, and safety. The pandemic has shown the importance of a healthy building environment to keep occupants well. For employers, employee productivity is also top of mind.

Building owners face a highly competitive market and must differentiate their buildings from others to attract and retain tenants. Building managers are tasked with ensuring their buildings meet the heightened expectations of their tenants. They are also finding ways to provide a high-end, frictionless building experience to make employees more productive when they are at the office. They are also finding that adding smart building capabilities is a hard-to-understand and poorly scoped process, and that finding experts to guide them can be difficult.

COHESION'S TOUCHLESS SOLUTION

Cohesion and HID Global have partnered to help building owners and managers meet their tenants' evolving demands for a safer, healthier and more convenient building through a mobile keycard. Cohesion is a comprehensive building experience app that includes an in-app mobile keycard that integrates with HID's Bluetooth-enabled card readers. Cohesion's single application provides all-access so that buildings can allow touchless access to their building, parking garage, office floor, and other buildings they may be associated with. This enables tenants to use their phones to move throughout the building without swiping a physical keycard.

Cohesion's standalone visitor management system elevates the visitor experience from invitation to departure. Visitors receive timebound QR code credentials the day of their visit, reducing touchpoints and wait times in the lobby. Users can easily schedule visits and receive notifications when the visitor arrives in the building. Building staff can audit visitor lists and create a watch list for non-approved visitors, enhancing building securing processes.

Cohesion's bi-directional software integration with HID Origo maximizes the potential of the building's access control system. Through Cohesion's role and permission-based platform, tenant managers can add and remove users and their credentials directly. Users receive instant access updates so that when they sign up for access to spaces like parking garages, bike rooms, or fitness centers, their mobile credentials are immediately updated as soon as the request is approved.

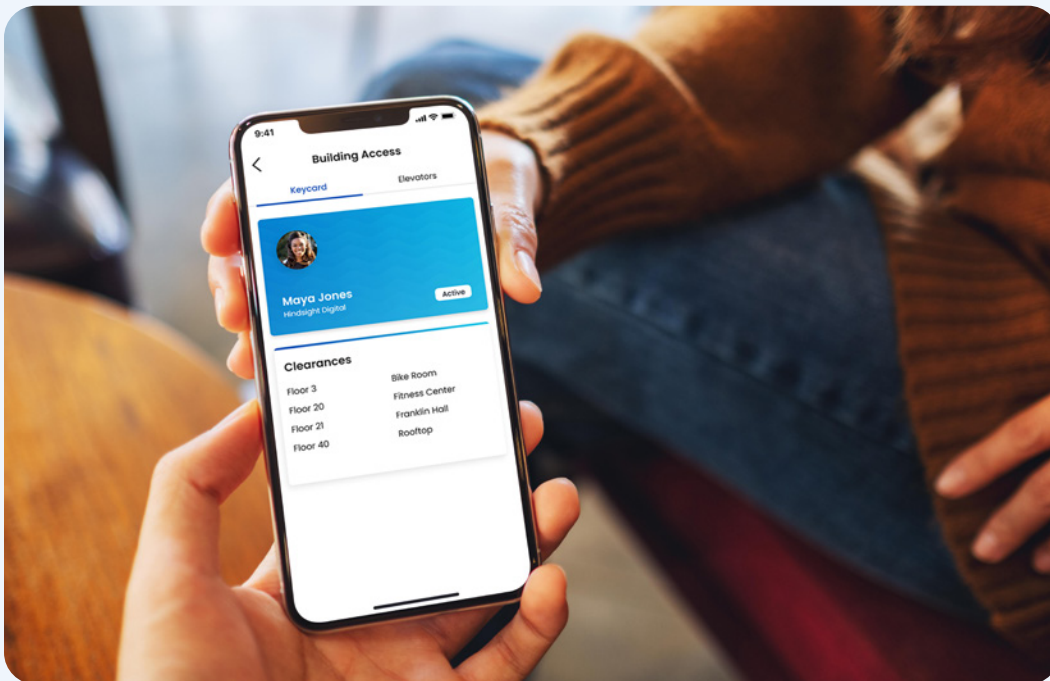

The Cohesion app also integrates with other building systems to deliver smart controls, streamlined operational workflows, and actionable insights to building owners and management.

FEATURES AND BENEFITS

The Solution From Cohesion and HID Origo Enables a Healthy, Safe Building:

- Building occupants and guests have easy access to doors, turnstiles, elevators and tenant spaces through their phone
- Mobile keycards are more secure than plastic keycards
- Cohesion's role and permission-based platform allows for instant access updates and simplified workstreams to increase productivity of the property management team
- Reducing physical contact with surfaces throughout the building reduces the risk of the spread of germs
- A touchless experience is a high-end perk of sophisticated properties

SUMMARY — INCREASE ASSET VALUE WITH TOUCHLESS ACCESS FROM COHESION AND HID ORIGO

Technology enables building management to enhance the tenant experience and provide a healthy, efficient workplace. Using Cohesion's building experience app with HID card readers enables a mobile keycard for easy access throughout the entire building. Touchless controls increase asset value by providing a safe and secure building, improving operations and increasing tenant satisfaction.

ABOUT COHESION

Founded in 2018, Cohesion was started to help commercial buildings better integrate a variety of systems into scalable, SaaS platforms. It empowers real estate owners to maximize asset and portfolio value with all building systems, workflows and people seamlessly connected in one intelligent building platform. The integration provides one unified access platform for building operators to control and improve building health and security, tenant experience and smart building operations, as well as automation. Cohesion's platform provides the most actionable insights in the market, enabling owners to reduce costs, enhance tenant experiences and increase operational transparency.
